The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Continuation of 5. does NOT place the application in condition for allowance because: The Applicant's remarks in view of claims is not overcome by prior art. The Applicant has responded to Final office action, mailed on June 7, 2004. The Applicant's remarks to this office action was received in the office on September 9, 2004, listed below are responses to Applicant's arguments:

First, the Applicant states that Paulsen fails to teach receiving at a network node, a request to assume the identity of the network node, and providing the network resource with the identity of the network node in place of the identity of the user. The user of Paulsen request access to resource on the network, the user is authenticated by the host(see col. 7, lines 31-54). Once the user is authenticated the remote client from which the user is using, is a virtual node on the network in able to access resources; thus, the user assumes the identity of a network node to access resources on the network(see col. 15, lines 63-67). The Applicant states that Paulsen does not disclose assigning a user the identity of a pre-authorized machine. The Examiner disagrees, with the Applicant, the nodes of Paulsen are already created, Paulsen discloses that a private network, includes a host computer and a plurality of nodes(see col. 5, lines 9-13). Thus, when the user assumes the identity of one of these nodes that are already preauthorized, because this nodes are attached to the private network(see col. 5, lines 35-48).
